Contents

1 Introduction 1
1.1 AI Returns to Its Roots 1
1.2 Potential Approaches to AGI 5
1.2.1 Can Digital Computers Really Be Intelligent? 7
1.3 Brief Summary of the CogPrime Approach 8
1.3.1 Virtually and Robotically Embodied AI 10
1.3.2 AGI Ethics 11
1.4 A Brief Summary of the Chapters to Come 12
1.4.1 Background 14
1.4.2 Understanding General Intelligence 14
1.4.3 Design for an AGI 14
1.4.4 Developmental Pathways 14

Part I Background

2 A Pragmatic Philosophy of Mind 17
2.1 Introduction 17
2.2 Patternist Philosophy 17
2.3 Formalizing Patternism 19
2.4 The Dynamics of Cognition 20
References 20

3 Insights from Cognitive Science 21
3.1 Introduction 21
3.2 The "Standard Model" of the Human Mind 21
3.3 Glocal Memory 21
3.3.1 A Semi-Formal Model of Glocal Memory 23
3.4 Piaget's Theory of Cognitive Development 26
3.4.1 Perry's Stages 28
3.5 Theory of Mind 31
3.6 The Intrinsic Sociality of the Self 32

3.7 Gardner's Theory of Multiple Intelligences 33
3.8 Consciousness 36
3.8.1 The Global Workspace 36
3.8.2 Perspectives on Machine Consciousness 36
References 39

4 Insights from Neuroscience 41
4.1 Introduction 41
4.1.1 High Level Brain Structures and Dynamics 41
4.1.2 Low Level Brain Structures and Dynamics 42
4.2 Knowledge Representation via Cell Assemblies 42
4.3 Neural Foundations of Learning 43
4.3.1 Hebbian Learning 43
4.3.2 Virtual Synapses and Hebbian Learning Between Assemblies 43
4.3.3 Neural Darwinism 44
4.4 Perception as Hierarchical Spatiotemporal Pattern Recognition/Generation 44
4.5 Glocal Memory in the Brain 44
4.6 Control and Planning as Hierarchical Spatiotemporal Pattern Recognition/Generatlion 48
4.7 Emotion and Motivation 48
4.8 Varieties of Memory 48
4.8.1 Semantic Memory 48
4.8.2 Procedural Memory 48
4.8.3 Episodic Memory 48
4.9 Language Processing 48
4.10 Neural Representation of Recursion and Abstraction 51
4.11 Mirror Neurons and Associated Neural Systems 53
4.11.1 Mirror Systems 54
4.11.2 Phenomenology of Mirroring 55
4.12 Attention and Awareness 56
References 56

5 Insights from Traditional AI Paradigms 57
5.1 Narrow AI versus AGI 57
5.2 Globalist versus Localist Representations 59
5.3 Computational Linguistics 60
5.4 Neural Networks 60
5.4.1 The Hopfield neural net model 60
5.5 Experimental explorations 63
5.5.1 Hierarchical Attractor Neural Networks 64
5.5.2 Neural Nets for Language Generation 64
5.6 Evolutionary Learning 66
5.7 Logical Reasoning 66

5.8 Neural-Symbolic Integration 67
5.8.1 Neural-Symbolic Glocality in CogPrime 68
References 70

6 Four Inspirational Cognitive Architectures 71
6.1 Stan Franklin's LIDA Architecture 72
6.2 Joscha Bach's MicroPsi Architecture 73
6.3 Itamar Arel's DeSTIN Architecture: A Deep Reinforcement Learning Approach to AGI 73
6.3.1 Deep SpatioTemporal Inference Network (DeSTIN) 73
6.3.2 Reinforcement Learning 74
6.3.3 Putting the Pieces Together 75
6.4 Pei Wang's NARS 76
References 76

Part II Understanding General Intelligence

7 A Formal Model of Intelligent Agents 79
7.1 Introduction 79
7.2 A Simple Formal Agents Model 79
7.3 SRAM: A Simple But Realistic Agents Model 80
7.4 The Cognitive Schematic 83
7.5 A General Cognitive Architecture 84
References 84

8 Formalizing Real-World General Intelligence 85
8.1 Introduction 85
8.2 Legg and Hutter's Definition of General Intelligence 86
8.3 Pragmatic General Intelligence 89
8.3.1 Incorporating Computational Cost 90
8.4 Assessing the Intelligence of Real-World Agents 91
8.5 Intellectual Breadth: Quantifying the Generality of an Agent's Intelligence 93
8.6 Conclusion 95
References 95

9 Cognitive Synergy 97
9.1 In Search of General Principles of Feasible General Intelligence 97
9.2 Cognitive Synergy 99
9.3 Cognitive Synergy in CogPrime 100
9.3.1 Cognitive Processes in CogPrime 100
9.4 Some Critical Synergies 104
9.5 The Cognitive Schematic 104

10 A Formalization of Cognitive Synergy 111
10.1 Introduction 111
10.2 Memory Subsystems as Categories 112
10.2.1 The Category of Procedural Memory 112
10.2.2 The Category of Declarative Memory 112
10.2.3 The Category of Episodic Memory 113
10.3 Modeling Memory Type Conversions Using Functors 113
10.3.1 Converting Between Declarative and Procedural Knowledge 113
10.3.2 Symbol Grounding: Converting Between Episodic and Declarative Knowledge 114
10.3.3 Converting Between Episodic and Procedural Knowledge 117
10.4 Learning Processes and Cognitive Synergy 118
10.4.1 Learning Processes 118
10.4.2 Compatibility among Learning Processes 119
10.4.3 Learning Synergy 121
10.4.4 Cognitive Synergy 122
10.5 Cognitive Synergy in the Service of Goal Achievement 122

11 General Intelligence in the Everyday Human World 125
11.1 Introduction 125
11.2 Some Broad Properties of the Everyday World That Help Structure Intelligence 125
11.3 Naive Physics and Folk Psychology 126
11.4 Embodied Communication 128
References 128

Part III CogPrime: Design for an AGI

12 High-Level Cognitive Architecture 131
12.1 Introduction 131
12.2 CogPrime's Cognitive Architecture 131
12.3 Tying Cognitive Architecture in with Software Architecture 132
References 132

13 The OpenCog Framework 133
13.1 Introduction 133
13.2 Complex Atomspaces 136
13.3 Cognitive Dynamics 138
13.3.1 The Implementation of CIMDynamics 138
13.3.2 Three Kinds of Cognitive Process 140
13.4 Scheduling: Allocating Attention Among MindAgents 143
13.4.1 An Example Scheduler Design 144
13.4.2 Tasks 146

13.5 The Management of Complex AtomSpaces 147
13.5.1 Control and Distributed Processing 147
13.5.2 Distribution and Live Caching of Atoms 148
13.5.3 Freezing and Defrosting 148
13.6 Distributed Cognition 150
13.6.1 Specialized Strategies for Distributing Particular Cognitive Algorithms 150
13.6.2 Globally Distributed Processing 151
13.7 System Parameters: Control, Adaptation and Optimization . . 152
13.7.1 System Parameters 153
13.7.2 Homeostasis 154
13.7.3 Firefighting 154
13.7.4 Long term optimization 156
References 156

14 Knowledge Representation Using the Atomspace 157
14.1 Introduction 157
14.2 Weighted Labeled Hypergraphs 157
14.2.1 Key Vertex and Edge Types 158
14.3 Derived Hypergraphs 159
14.3.1 SMEPH Vertices 159
14.3.2 SMEPH Edges 160
14.3.3 Implications of Patternist Philosophy for Derived Hypergraphs of Intelligent Systems 162
14.4 Explicit and Implicit Knowledge Representation in CogPrime 163
14.4.1 Explicit Knowledge Representation: Nodes and Links . 163
14.4.2 Implicit Knowledge Representation: Maps and the Derived Hypergraph 165
14.5 Denoting Atoms 166
14.5.1 Meta-Language 167
14.5.2 Denoting Atoms 169
14.5.3 Denoting Functions and Predicates 174
14.5.4 Variable and Combinator Notation 183
14.5.5 Inheritance Between Higher-Order Types 185
14.5.6 Advanced Schema Manipulation 186
References 190

15 Emotion, Motivation, Attention and Control 191
15.1 Introduction 191
15.2 Adapting the Psi Model for CogPrime 191
15.3 Goals and Contexts 192
15.3.1 Goal Atoms 192
15.3.2 Context Atoms 192
15.4 Ubergoal Dynamics 193
15.4.1 Implicit Ubergoal Pool Modification 193

15.4.2 Explicit Ubergoal Pool Modification 194
15.5 Goal Formation 194
15.6 Goal Fulfillment and Predicate Schematization 195
15.7 Context Formation 195
15.8 Execution Management 196
15.9 Goals and Time 197
References 198

16 Attention Allocation 199
16.1 Introduction 199
16.2 Semantics of Short and Long Term Importance 201
16.2.1 The Precise Semantics of STI and LTI 202
16.2.2 STI, STIFund, and Juju 203
16.2.3 Formalizing LTI 204
16.3 Defining Burst LTI in Terms of STI 206
16.4 Valuing LTI and STI in terms of a Single Currency 207
16.5 Economic Attention Networks 209
16.5.1 Dynamics of STI and LTI Propagation 210
16.5.2 ECAN Update Equations 210
16.6 Glocal Economic Attention Networks 216
16.6.1 Experimental explorations 217
16.7 Long-Term Importance and Forgetting 218
16.8 Attention Allocation via Data Mining on the System Activity Table 218
16.8.1 The System Activity Table 219
16.9 Schema Credit Assignment 220
16.10 Interaction between ECANs and other CogPrime Components 222
16.10.1 Use of PLN and Procedure Learning to Help ECAN . . 222
16.10.2 Use of ECAN to Help Other Cognitive Processes 222
16.11 MindAgent Importance and Scheduling 223
References 224

17 Goal and Action Selection 225
17.1 Introduction 225
17.2 Transfer of STI "Requests for Service" Between Goals 226
17.3 Feasibility Structures 228
17.4 Goal Based Schema Selection 228
17.4.1 A Game-Theoretic Approach to Action Selection 229
17.5 SchemaActivation 230
17.6 GoalBasedSchemaLearning 231
References 231

18 Dimensional Embedding 233
18.1 Introduction 233
18.2 Link Based Dimensional Embedding 234
18.3 Harel and Koren's Dimensional Embedding Algorithm 235
18.3.1 Step 1: Choosing Pivot Points 236
18.3.2 Step 2: Similarity Estimation 236
18.3.3 Step 3: Embedding 237
18.4 Embedding Based Inference Control 237
18.5 Dimensional Embedding and InheritanceLinks 239
18.6 Probabilistic Evolutionary Learning 241
References 241

19 Representing Procedural Knowledge 243
19.1 Background and Motivation 243
19.2 Representational Challenges 244
19.3 What Makes a Representation Tractable? 245
19.4 (Postulated) Tractable Representations 247
19.4.1 Normal Forms 247
19.4.2 Program Transformations 251
19.5 Declarative Representation of Procedures 255

42.3 Requirements for Naturalistic Bodies . . . 575
42.3.1 Requirements for Multimodal Communication . . . 577
42.4 The Extended Mind and Body . . . 577
42.5 Are These Requirements Adequate? . . . 578
42.6 BlocksNBeadsWorld . . . 580
42.7 Conclusions and Future Directions . . . 584
References . . . 586

43 The Advantages of Preschool-Type Environments for Early-Stage Human-like AGIs . . . 587
43.1 Introduction . . . 587
43.2 Elements of Preschool Design . . . 587
43.3 Elements of Preschool Curriculum . . . 588
43.3.1 Preschool in the Light of Intelligence Theory . . . 591
43.4 Task-Based Assessment in AGI Preschool . . . 591
43.5 Issues with Virtual Preschool Engineering . . . 595
43.6 Beyond Preschool . . . 596
References . . . 597

44 The Argument for CogPrime . . . 599
References . . . 599

45 A Roadmap to Advanced AGI . . . 601
45.1 Long-Term Goals . . . 601
45.2 Specifying Incremental Capabilities: Taking Human Cognitive Development as a Guide . . . 602
45.3 Evaluating Incremental Progress . . . 603

A Atom Types and MindAgents in the Current OpenCogPrime System . . . 605
A.1 Atom Types . . . 605
A.1.1 Node Types . . . 605
A.1.2 Link Types . . . 605

A.2 MindAgents 605

B Propositions About Environments in Which CogPrime Components are Useful 607
B.1 Propositions about MOSES 607
B.2 Proposition: ENF Helps to Guide Syntax-Based Program Space Search 607
B.3 Demes are Useful if Syntax/Semantics Correlations in Program Space Have a Small Scale 608
B.4 Probabilistic Program Tree Modeling Helps in the Presence of Cross-Modular Dependencies 608
B.5 Relating ENF to BOA 609
B.6 Conclusion Regarding Speculative MOSES Theory 609
B.7 Propositions About CogPrime 610
B.8 When PLN Inference Beats BOA 611
B.9 Conditions for the Usefulness of Hebbian Inference Control . . 611
B.10 Clustering-together of Smooth Theorems 612
B.11 When PLN is Useful Within MOSES 612
B.12 When MOSES is Useful Within PLN 612
B.13 On the Smoothness of Some Relevant Theorems 613
B.14 Recursive Use of "MOSES+PLN" to Help With Attention Allocation 614
B.15 The Value of Conceptual Blending 614
B.16 A Justification of Map Formation 614
B.17 Concluding Remarks 614

C Mapping Quantified Language into Atoms 617
C.1 Introduction 617
C.2 Every boy loves cheese 617
C.3 Every boy loves a girl 619
C.4 Every boy loves a few girls 620
C.5 Every boy loves many girls 621
C.6 Every man owns a dog that every woman loves to call by a special pet name 621

Glossary 625
